

Phone_Cases_ASC: why it underperforms and what to change

Meta Ads account: DailyObjects Prepaid 1 · ASC live since 1 Oct 2026 (6 days of data) · compared with 25 Stack / iPhone standalone campaigns

Short answer. The ASC isn't failing because its ads are weak. It's 10× bigger than any standalone, most of its money goes to one mid-tier ad, and it's bidding against your own standalone campaigns in the same auctions.

1. The headline numbers (same window, 1-6 Oct)

Campaign	Spend	ROAS	CPA	Add-to-cart rate after landing	Purchase rate after add-to-cart
Phone_Cases_ASC	₹3.87L	2.48	₹1,023	16.4%	11.3%
10 active Stack/iPhone standalones	₹4.12L	4.00	~₹680	~24%	~14%

- **Cost per 1,000 impressions isn't the problem.** The ASC buys impressions at ₹98 per 1,000, against ₹140 for the standalones.
- **Order value isn't the problem either.** The average order is ₹2,541 in the ASC and ₹2,559 in the standalones.
- **The gap is visitor quality.** People reach the site, then add to cart and buy far less often. The ASC is buying cheap, low-intent people.

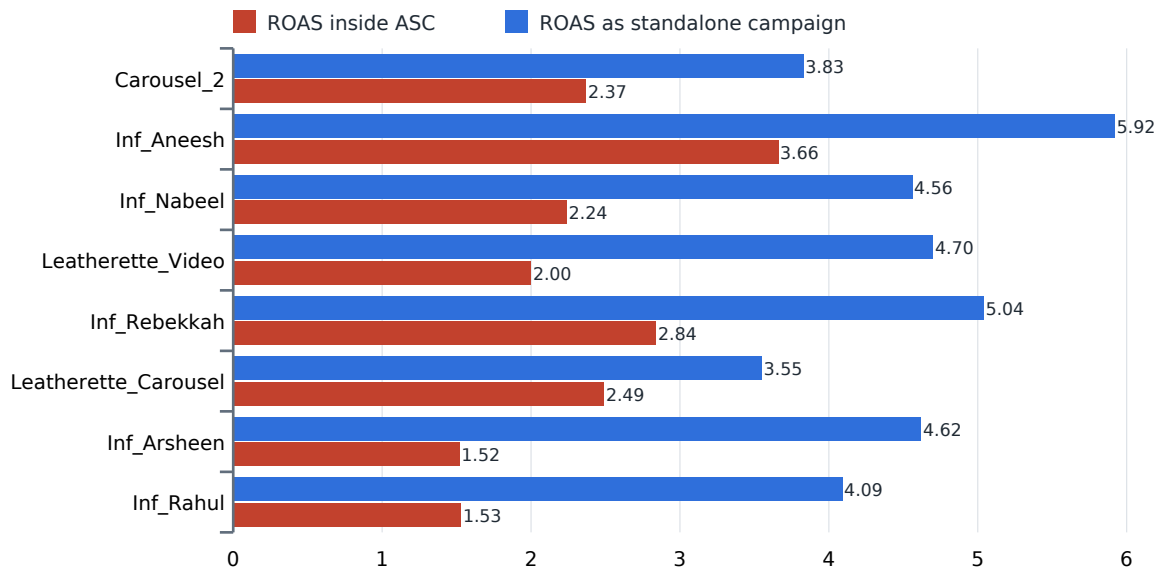

2. Why the ASC does worse with the same ads

a) Scale

The ASC spends ₹65–79k a day. Each standalone gets ₹5–9k a day, which is only enough for Meta to reach the most likely buyers for that one ad. At ₹70k a day, Meta has to go much deeper into lower-intent people. Frequency is already **2.5 in 6 days**, while the standalones sit around 2.0 over 30 days.

b) Spend is concentrated on one mid-tier ad

Ad inside the ASC	Share of ASC spend	ROAS in ASC	ROAS as standalone
Stack_Leatherette_Carousel_2	47%	2.37	3.83
iPhone_18_Inf_Aneesh	12%	3.66	5.92
iPhone_18_Inf_Nabeel	11%	2.24	4.56
Stack_Leatherette_Video	11%	2.00	4.70
iPhone_18_Inf_Rebekkah	9%	2.84	5.04
Arsheen / Rahul / Gurshaa / Carousel_1	~9%	1.5–2.6	3.5–4.6

Meta favours the carousel because it gets cheap clicks: ₹92 per 1,000 impressions and the most link clicks. But those visitors add to cart only 14% of the time. Your two best ads (Aneesh and Rebekkah) get just 21% of the budget.

c) The ASC is competing with your own standalones

It runs the same ads to the same broad audience. Since it launched, most standalones have dropped:

Standalone	ROAS 22-30 Sep	ROAS 1-6 Oct
iPhone_18_Inf_Aneesh	6.77	4.72
iPhone_18_Inf_Rebekkah	6.04	4.65
iPhone_18_Inf_Rahul	4.59	3.29
Stack_Inf_Arsheen	4.70	3.90
Stack_Leatherette_Video	3.94	3.56

Nabeel is the exception: it went from 3.75 to 4.90. Overall, you added about ₹65k a day without the account's total ROAS rising to match. That points to the ASC competing with your own campaigns, though ad fatigue could also be part of it.

d) Placements and age are not the cause

The ASC is weaker in every placement:

- Instagram Reels: 2.50 in the ASC, 4.5–5.3 in the standalones.
- Instagram Feed: 2.60.
- Instagram Stories: 2.15 on ₹58k of spend.
- Smaller leaks: WhatsApp got ₹2.1k for 0 purchases, Threads ₹1k for 1 purchase, and Facebook Feed 1.83.
- People aged 45+ got about 6% of spend at roughly 1.7 ROAS.

e) The ads were created fresh

They have new ad IDs, so they probably don't carry the likes, comments and shares the standalone posts have built up.

3. What to do, in priority order

- 1 Stop the overlap.** Pick one structure for each creative. Either pause the standalones that duplicate ASC ads, or take those ads out of the ASC. Recommendation: keep the standalones running for your proven winners (Aneesh, Rebekkah, Nabeel, Arsheen), since they make 4-6x.
- 2 Cut the ASC budget to about ₹25-30k a day** while you fix it. Raise it later by about 20% every 3 days, only while ROAS stays above 3.
- 3 Remove or limit Stack_Leatherette_Carousel_2 in the ASC.** It already runs as a standalone, and it's taking half the ASC budget at 2.37. With it gone, spend moves to the video ads that convert better. Also remove Arsheen and Rahul from the ASC, both around 1.5.
- 4 Rebuild the ASC ads using existing post IDs** from the winning standalones, so the ads keep their engagement.
- 5 Add a minimum ROAS goal of about 3.0, or a cost-per-result goal of about ₹750,** so Meta stops buying low-intent conversions to spend the full budget.
- 6 Exclude WhatsApp, Threads and Audience Network** from placements. It's small (~₹3k) but pure waste.
- 7 Use the ASC to find new winners rather than scale old ones.** Put new, untested phone-case ads in the ASC, and move any that beat 4x into their own standalone.

Caveats

- The ASC has only 6 days of data. 6 Oct is a partial day and purchases are still being attributed.
- The standalone drop since 1 Oct lines up with the ASC launch, but that alone doesn't prove the ASC caused it.
- Windsor doesn't show how much of the ASC budget went to existing customers. Check that in Ads Manager under "Existing customer budget %".
